

HOW TO MAKE A SELF WATERING SYSTEM

FOR PLANTS

Page 1

	STEP 1
	Remove the plastic wrapper from the bottle and put aside for recycling.
	STEP 2
	Cut the top section off the bottle using scissors.
	STEP 3
	Use the string and measure 1 ½ lengths of the bottle and cut to size.
	STEP 4
	Use a nail or sharp tool to make a hole in the bottle lid.
	STEP 5
	Thread the string through the hole in the bottle lid.
	STEP 6
	Screw the bottle lid back on the bottle. Adjust the string so the lid is about half way.

	STEP 7
	<p>Fill the cut bottle about half full with water and place.</p>
	STEP 8
	<p>Place the lid on the bottle and half fill with soil.</p>
	STEP 9
	<p>Curl the rest of the string inside the lid and leave the end sticking out. Add more soil until the curl is covered.</p>
	STEP 10
	<p>Use your finger to make a hole in the soil for the plant.</p>
	STEP 11
	<p>Place the plant roots carefully in the hole and cover with soil. Make sure it is secure.</p>
	STEP 12
	<p>Your self watering plant system is now ready!</p> <p>Use a permanent marker to write your name on the bottle.</p>
